

Project Overview

Stock Market Tool

Project Goals

Simplify
complex
stock market
data for new
and
intermediate
investors.

Provide easy
access to
current and
historical
**stock
information.**

Offer basic
advice based
on data
trends to
support
**decision
making.**

Make the
experience
user-friendly
and less
overwhelming.

Reduce the
need for
users to
**manually
search**
multiple
websites.

Description

Designed for users of all **stock market skill levels.**

Lets users search for a company by **stock symbol.**

Shows **easy to understand** company and stock information.

Highlights whether the stock is trending **up** or **down.**

Offers **basic advice** to guide **investment decisions.**

Use Cases

Use Case 1

Business Analyst

Evaluates small company for **acquisition**.

Views **stock trends** (growth, stability).

Reviews company **overview**.

Use Case 2

New Investor

Looks for **low risk** investment **options**.

Analyzes **recent trend data**.

Uses **analyst sentiment** to guide **decision**.

Technology

Python Modules

requests: calls API and handles JSON data

webbrowser: opens stock symbol lookup site

csv: saves data for Excel use

datetime: names files with current date

matplotlib: graphs stock price trends

sys: allows user to quit program

New Technology: APIs

Alpha Vantage API: Real-time & historical stock data

Program Flow

User runs the program and **selects a stock symbol**.

Program checks if the symbol is valid using **Alpha Vantage API**.

User chooses to **view stock overview info, get advice, or export close data**.

Stock data and analyst ratings are **retrieved and analyzed**.

Program gives **simple investment advice** based on metrics.

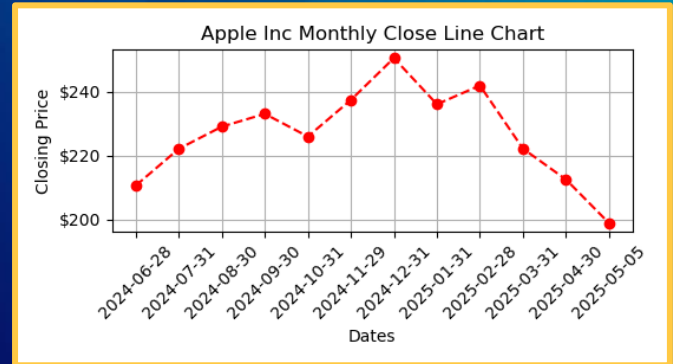

Exports data to CSV and **makes & saves a line chart PNG file** for later use.

Menu repeats until the user **quits**.

```
=====
You are looking at Apple Inc with the symbol AAPL.
```

```
📄 Please choose an option.
```

- ```
=====
1. View stock data, save to CSV, and view line chart display.
2. View company information.
3. Get investment advice.
4. Change the stock you'd like to view.
q. To quit.
```

# One Error Encountered

## Encountered Error

Program **crashed** when **API fields** like **Beta** or **PEGRatio** were **missing**.

Caused a **ValueError** when trying to convert **empty strings** to **floats**.

```
"Beta" : float(overviewJSON["Beta"]),
ValueError: could not convert string to float: ''
```

## How We Fixed It

Added **function** called **safeconversionfloat** to **catch errors** and **return 0.0** instead.

Prevented **crashes** and **kept program running** smoothly for **all stocks**.

```
def safeconversionfloat(number):
 try:
 return float(number)
 except (ValueError, TypeError):
 return 0.0
```

```
"Beta" : safeconversionfloat(overviewJSON["Beta"])
```
